Leland Clark 785.792.6208

## POST ROCK CATTLE COMPANY

Dear Fellow Cattle Producers:

Welcome to this year's edition of The Cowman's Kind Bull and Female Sale. What an interesting and challenging year 2019 turned out to be. Like many in the Midwest, we suffered through a terrible winter for cattle production, with abnormally high calf death loss and poor performance. However, when spring arrived, we had full ponds, green grass, and really nice crop yields. We put the Gelbvieh cows noted fertility to the ultimate test and remarkable came in with our highest preg. check ever with less than 1 1/2 % open cows in an 80 day breeding season.

Informed buying decisions become more and more important every day. Every bull selling will have current GENOMIC ENHANCED EPDs as of the catalog print deadline. Every bull has been DNA tested or known by birthright about being homozygous polled or homozygous black. In addition, every bull selling has been DNA sire verified, and any bull that had potential to have any known genetic defects from Angus has been DNA tested free. Finally, every bull selling has been ultrasounded for ribeye area (REA), intramuscular fat (IMF, marbling) to aid in your sire selections. DNA testing and ultrasound collection are a major expense of both money and time commitment, but we feel they are necessary to positively impact buyers' decisions and profitability while giving us future insight into genetic matings.

This year's sale offering is extremely strong. The bulls are a tremendous group and are loaded from top to bottom in both the Purebred and Balancer divisions. We are offering many new AI sire groups to choose from, and some of our most proven genetics sell in volume sire groups. Many of the cows who produced this bull crop have multiple generations of AI and ET matings stacked to produce the highest herd sires available. Over 600 cows and many AI and ET matings were used to produce the bulls selling this year, and the sale offering reflects that level of culling and commitment. Additionally, we feel the 6-year-old and the 2-year-old females are an extremely strong group as well. Many of the elite, proven donors of the breed are the dams or the granddams of several females selling. We are proud of each and every bull and female selling, and each animal is expected to have a positive on their new owner's herd.

As in the past, we have bulls from our cooperator herds: Meadowlark Gelbvieh, Dawson Creek Gelbvieh, Twin Oak Gelbvieh, and Stucky Beef Genetics. Our cooperator herds allow us to increase selection pressure placed on the bulls and make it possible for us to offer more and better bulls. We share in the income from these bulls, and they are represented and guaranteed just like our bulls. Should a problem arise, you will deal with Post Rock.

We hope to assist you in increasing your profitability, as our survival in the seedstock business is based on it. We have learned from experience that, unfortunately, we cannot spend enough time with each of you on sale day. We encourage you to call or visit at any time prior to the sale. We look forward to seeing you February 29 at the sale.

Sincerely,  
Bill and Leland Clark

### DIRECTIONS TO POST ROCK CATTLE CO.

When coming from the west, exit K14 onto K284. Go east 6 miles to Barnard. Then, go east on county blacktop 4 miles, south 1 mile and, then, east 1.5 miles.

When coming from the north on US 81, exit west K41. Then, south on N 120th Road. When coming from the south on US 81, exit midway between mile marker 173 and 174. Then, go west to N 120th Road. Turn and go north on N 120th Road. From N 120th Road, turn west on Mulberry Road, 10 miles to Ada. Continue west on the blacktop. Note as you go west on Mulberry Road it changes names each time you turn a corner, but stay on the blacktop until you get to Post Rock Cattle Co.

If you will be using GPS directions please type in 3041 E Vine Street, Barnard Kansas Our GPS and mail address is not the same.

# Cowman's Kind BULL AND FEMALE SALE

**FEBRUARY 29, 2020 • 12:30 PM (CST)**  
Post Rock Cattle Company Sale Facility • Barnard, Kansas

**104 BULLS SELL • 80 FEMALES SELL**  
Gelbvieh and Balancer® • Including all six year old cows.

## SALE DAY PHONES

Ranch	785-792-6244
Bill Clark	785-392-0889
Leland Clark	785-392-0888
Chris Mitchell	334-695-1371

## AUCTIONEER

Doak Lambert

## SALE REPRESENTATIVES

Guy Peverley	Stock Exchange
Stephen Russell	Kansas Livestock Association

## FOOD & REFRESHMENTS

Join us on Friday night for our annual hamburger fry and lunch will be served on sale day with refreshments available all day.

## SALE DAY SUPPLEMENT SHEET

Actual scrotal measurements and updated calving will be available sale day.

## SALE OFFERING VIDEOS

Visit [www.mms.bz](http://www.mms.bz) to view the sale offering videos available on the bulls and females selling.

## ONLINE INTERNET BIDDING

Visit [www.dvauction.com](http://www.dvauction.com) to register and bid live online. Buyers must pre-register to bid online.

**DVAuction**  
Broadcasting Real-Time Auctions

## TELECONFERENCE LINE

Teleconference line will be available sale day. Call Post Rock to get conference line number, pin number and get a buyer number.

## SALE HEADQUARTERS

Salina is 45 miles from the ranch and is served by most major motel chains. If you need help with accommodations, please call Post Rock Cattle Company.

## SEMEN INTEREST

RETAINING 1/3 SEMEN INTEREST IN ALL BULLS SELLING UNLESS OTHERWISE NOTED. Buyer will take 100% possession, 100% salvage value. Semen collection, if we elect to do so, will be at our expense and your convenience during the off breeding season. Should the buyer elect to collect semen on bulls, the expense and semen collected will be 100% of the buyer. At a later date, by mutual agreement, if semen sales are a possibility the mutually agreed on expenses and revenue will be split 1/3 Post Rock and 2/3 new buyer.

## ULTRASOUND

Ultrasound data was collected on all bulls selling January 3, 2020. Be sure to compare only within contemporary groups for example Fall born purebreds to Fall born Purebreds. This is covered in Detail in the ABOUT THE SALE CATTLE PAGE.

## GENOMIC ENHANCED EPDS

ALL BULLS selling have genomic enhanced EPDs and are sire verified.

## HOMO BLACK HOMO POLLED

All bulls except those known by birthright have been tested for homozygous black and homozygous polled, and are denoted in the sale book.

## SALE FORMAT

2020 sale will be held as a video auction at the sale barn at Post Rock Cattle Company.

## SPRING CALVING INFORMATION

Calving information will be updated weekly and posted on MMS.bz every Friday beginning Friday, February 14th or you may call our office for the weekly update as well.

## TERMS & CONDITIONS

### Terms

The terms of the sale are cash. Animals are to be paid for during or immediately following the sale. Each animal will be sold to the highest bidder. We have made every effort to provide as complete and accurate information as possible. However, announcements from the auction stand will take precedence over information printed in the catalog.

### Bidding

Any disputes or challenges regarding bids shall be settled by the auctioneer, and his decision shall be final. Mail or telephone bids will be handled with strictest of confidence.

### Semen Check & Guarantee

Each bull is guaranteed to settle healthy, fertile females and has been semen tested. Should any bull be claimed a non-breeder, the recommendation of the American Gelbvieh Association will apply. However, this does not preclude us from making adjustments that are mutually beneficial to both parties.

### First Breeding Season Guarantee

- If any bull purchased in the Cowman's Kind Sale or privately from Post Rock is disabled during the first 90 days following first turn out of a young bull, the following guarantee will apply.
- If your young bull is temporarily unable to complete the breeding season, if possible, Post Rock will provide you with a loaner bull without cost to you other than transportation of the bull from and back to Post Rock.
- If your bull becomes permanently disabled, Post Rock will allow full credit (\$5000 Maximum) toward the purchase of one bull in the next Post Rock sale. Post Rock will receive the salvage value of the injured bull. Should the bull you purchase cost more than your credit you pay the difference. If he costs less, no further credit is due to you.
- The above warranty is for bulls used in a single sire breeding pasture. If two or more bulls are used in a breeding pasture the warrant is reduced to 50% of the initial purchase cost.
- If you have a problem, please notify us as soon as possible since we try to keep a few bulls available in case your new Post Rock bull is disabled during the first breeding season.

### Liability

All persons attending the Cowman's Kind Sale do so at their own risk. The sale sponsors, sale manager and/or any other seller assumes no liability for accidents, theft or damages done during this event on site of Post Rock Cattle Company.

### Trich Testing

Many states have new rules for trich testing and none of the sale bulls have been tested. Should a Trich Test be required Post Rock will pay costs involved and complete the testing requirements soon following the sale.

### Female Lots

Please make arrangements to pickup all female lots within one week of the sale date. If you want Post Rock to deliver female lots delivery prices will apply. Up to 100 miles \$75.00 per lot, 101 to 300 miles \$125.00 per lot, 301 to 500 miles \$200 per lot and over 501 miles \$250.00 per lot. Cattle will be trucked by a commercial carrier.

### BULL Free Delivery or Free Care Until May 1

You may select your choice of the following delivery options for your bull purchases:

- Option 1-Haul your bull sale day and we will deduct \$100 per bull. We will assist you in loading out immediately following the sale.
- Option 2-We will care for your bulls free of charge but at the purchaser's risk and you pick them up any time prior to May 1. Bulls remaining at Post Rock after May 1 will be charged \$2.50 per head per day.
- Option 3-We will deliver bulls free of charge up to 300 miles with additional miles prorated per head and that cost will not exceed \$250 per lot. Purchases totaling \$20,000 or more will be delivered free of charge to an individual ranch or to a central location within your state on group purchases. For animals that we deliver you are encouraged purchase individual animal insurance that will be available sale day at the rate of 4% of the purchase price for 6 months coverage. Other rates apply for longer or shorter insured periods. Inquire at the clerks table.

### Registration Certificates

Registration certificates will be transferred on all sale lots at the seller's expense, except for those marked as unregistered or announced otherwise.

### Sight Unseen Purchases

If you are unable to attend the sale, a bull can be purchased for you on order during the auction. Please call either Leland Clark or Chris Mitchell in advance of the sale and discuss with us the price range and the type of bull you are looking for, and we will recommend the bull or bulls that will fit your needs. If you don't like the bull when he is delivered to your place, he's not yours; and the money paid will be refunded. If the bull can be purchased for less than your maximum bid, you get the bull for the amount he left the ring at, just as if you were bidding for yourself. Each year, breeders take advantage of this free service. Call if you would like more information or a reference. *For sight unseen satisfaction guarantees, you must purchase an animal that either Bill or Leland have previously recommended to fit your needs.*

### Mortality Insurance

Insurance will be available on sale day at the rate of 4% of the purchase price for 6 months coverage. Other rates apply for longer or shorter insured periods. Inquire at the clerks' table.

### TELE-AUCTION AVAILABLE

Post Rock is located in a very poor cell phone reception area and we encourage you to utilize this service. If you will be unable to attend the sale, you can do your own bidding via a conference telephone hook up that will connect you to ringside for the sale. You will be able to listen to the sale in progress, talk directly to our ringside representative and bid. Buyers interested in the option should call Bill prior to sale day at 785-792-6244. You will be given the phone number and pass code to join the tele-auction and assigned a bidder number with which to do your bidding. Your only cost will be your normal long distance charges, charged by your long distance carrier. This would work well if you have looked at the sale offering prior to sale day and for sight unseen purchases.

## ABOUT THE SALE CATTLE

### FALL BULLS

The fall bulls were weaned May 20 after being raised on their dams on milo stocks or native pasture with sorghum silage, DDG, and ammoniated wheat straw and received no creep feed. After weaning, the bulls were raised on a rotational grazing system on sedan grass with supplementation of Purina Feeds acu-ration and 8 lbs. of corn per day. Late September, they were switched to a ration of silage, wet distillers, 1 lb. of corn per 100 lbs. of body weight, ammoniated wheat straw, and grinding-quality alfalfa hay.

### SPRING BULLS

Spring bulls were raised on their dams on native pasture and received no creep. They were weaned September 9 and were placed on a gain test on 10/2/19 through 1/5/20 on a ration of sorghum silage, wet distillers, 1 lb. of corn per 100 lbs. of body weight, ammoniated wheat straw, grinding quality alfalfa hay, and a vitamin mineral pack on a ration designed for 3.25 pounds of gain per day.

### ULTRASOUND

All bulls selling were ultrasound-measured on 1/3/20. The spring bulls were ratio'd in as large of contemporary groups as possible for the purebred and balancer groups. However, bulls from time to time were not in a contemporary group and therefore don't have a ratio—only an actual measurement. This data was collected by a CUP certified technician, and all data was submitted to the AGA. The fall bulls were too old for data submission, and all data is actual measurements collected by the same certified technician but was a chute side reading only.

The fall purebred and Balancer group were ratio'd against each other. This would include ET bulls and all bulls from all co-operators as they have all been handled the same for over 6 months. As with all raw data, comparisons must be made only within and not between contemporary groups. As an example, compare only spring Balancers to spring Balancers and spring purebreds to spring purebreds. You'll notice a large difference between the fall bulls data & the spring bull data even though many of the same sires are represented in both groups. This was due to the way the bulls were developed and the timing of the ultrasound measurements. Most of the fall bulls were over 365 days old and were adjusted back with decreased rib eye

size considerably while the spring bulls were more typically measured at 11 months of age with a small adjustment up to 1 year of age. If you've followed our program you'll realize in the past 5 to 7 years we have greatly increased our selection pressure on marbling both from an EPD sire selection stand point as well as actual measurements. You'll find many bulls with top 10 to 25% marbling genetics with the data to back it up without sacrificing our 30 plus year goal of "WHERE CALVING EASE, PERFORMANCE AND EYE APPEAL COME TOGETHER."

### SALE COWS

As in the past, our sale group of females includes all our sound six year olds and approximately 20 two year old heifers, most with calves at side. This year's sale group is really strong and includes more top-end cows and is from top to bottom our strongest, most consistent group to date. In addition, there are more cows that every ranch needs more of. Cows that get bred every year bring in a calf in the top half of their contemporary group and have high quality udders and the added look and eye appeal we demand.

The two year old sale heifers are selected as a cross-section of our two year olds. Any cow that has at least two daughters in the herd that has an additional daughter is available as a sale heifer as well as any heifer that we have a large number of from their cow family and sire group. These two year olds are handled exactly like the heifers we retained and haven't received any additional supplementation to fatten them up for the sale. We feed no grain to our heifers after weaning—only ammoniated wheat straw, sorghum silage, wet distillers, and grinding quality alfalfa hay. Three weeks prior to AI, as virgin heifers, they receive 2 lbs. of corn for fleshing them up for AI breeding, and this is the only grain they ever receive during their development.

All females bred or exposed greater than 100 days have been pregnancy checked and expected to calve consistent with their respective breeding dates or pasture exposure listed in the catalog. The fall calving cows selling with calf at side have been pasture exposed since calving but sell only as exposed but not guaranteed safe in calf.

## DEFINITIONS FOR DATA IN SALE BOOK

### INFORMATION ABOUT THE BULLS

Our catalog contains a great deal of information, weights and measurements. To clarify the information, please remember that all Scrotal Measurements are actual measurements. Birth Weights are actual weights taken at birth. Weaning and yearling weights are adjusted to 205 days and 365 days respectively.

<b>BW</b>	=	Actual Birth Weight
<b>WW</b>	=	Adjusted Weaning Weight
<b>YW</b>	=	Adjusted Yearling Weight
<b>REA</b>	=	Ultrasound Rib Eye Area, adjusted or actual as noted
<b>IMF</b>	=	Ultrasound Intramuscular Fat, adjusted or actual as noted
<b>FAT</b>	=	Ultrasound Rib Fat, adjusted or actual as noted

### EPDs IN THE SALE BOOK

<b>CED</b>	=	Epd for Calving Ease Direct	<b>CEM</b>	=	Epd for Calving Ease Maternal
<b>BW</b>	=	Epd for Birth Weight	<b>YG</b>	=	Epd for Yield Grade
<b>WW</b>	=	Epd for Weaning Weight	<b>CW</b>	=	EPD for Carcass Weight
<b>YW</b>	=	Epd for Yearling Weight	<b>REA</b>	=	EPD for Rib Eye Area
<b>MK</b>	=	Epd for Milk	<b>MB</b>	=	EPD for Marbling
<b>TM</b>	=	Epd for Total Maternal	<b>FPI</b>	=	Feeder Profit Index

**Genomic EPDs:** Genomic EPD's for all bulls will be on mms.bz when the tests have been completed.

**\$Cow:** Represents the genetic value in dollars of profit of an animal when retained as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics for maternal productivity. \$Cow will serve producers in selecting bulls that will sire daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system, such as milk, calving ease, moderate mature weight and the ability of calves to gain. A female's genetics also influence the performance of her calves in the feedlot and at slaughter, so traits such as feed efficiency and carcass value are also included in \$Cow.

**Feeder Profit Index (FPI):** An economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on grade and yield. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.

**Efficiency profit index (EPI):** An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain. The EPI provides slight negative pressure on intake, while keeping gain at a constant value. By selecting on this index, producers will be able to find those animals that gain the same amount as their contemporaries while eating less.

## Genomic EPDs and Ratios Versus Raw Weights

We work very hard at collecting and providing an enormous amount of unbiased individual data, which is then ratioed against as large a contemporary group as possible. Ultimately, these ratios end up in the calculations of EPDs along with pedigree estimates, and more recently, DNA analysis for the genomic-enhanced EPDs that are listed in this catalog. In the past, we have always published the actual data and highlighted the individual ratios and dam ratios in the footnotes for a clearer picture of the animals' genetic makeup. However, the weather factors of 2019, which are not genetic related, have ended up providing the perfect storm as to why producers should always use genomic-enhanced EPDs and ratios rather than using actual data when making selections.

A case in point: Our fall calves were born in adverse conditions and suffered all winter, ending up with weaning weights of nearly 150 lbs lower than normal. Meanwhile, our spring calves, while born in awful conditions last winter, performed better than average for weaning weights given last summer's abundance of grass and frequent rains. Compounding the problem even more, the spring calves were fortunate to have utilized the best corn silage we will probably ever produce along with ideal feeding conditions; so they gained almost  $\frac{3}{4}$  lbs per head per day more on test than the ration was designed to produce. Contrast that to the fall bulls which weaned 150 lbs light; and although we had adequate opportunity to "catch up," we chose to continue with our normal rotational sorghum grazing with acurration limit grain feeding to ensure their proper development. The net result is that the spring bulls have impressive weaning and yearling weights, while the fall bulls with the same exact genetic potential have weights of at least 150 lbs lighter at weaning and over 300 lbs less at yearling than their nearly identical genetic counterparts. Add to the equation the variety of contemporary groups that the fall bulls were raised in; and it becomes a huge problem as to how to best present the data in the catalog.

After much discussion of how to provide as much actual data as possible without being misleading, we have decided to provide actual birth, weaning, and yearling weights on the Post Rock spring bulls and cooperators along with many ratios in the footnotes, as we have done in the past. The Post Rock fall bulls will have actual birth weight and weaning weight and yearling weight ratios as their indicators of actual growth potential along with a current weight taken January 6.

In genetic selections, we always start with our eyes to make sure the principles of sound stockmanship are applied with regard to feet and leg structure, udder quality of dams, and whether or not they are, in fact, good bulls or females. But we are also big proponents of especially genomic-enhanced EPDs and the value they hold for real genetic advancement in calving ease, growth, and carcass traits. Individual raw weights, in the absence of contemporary group ratios, are basically worthless; however, individual weights from which actual meaningful ratios of at least 10-head contemporary groups are calculated certainly have substantially more value than an impressive stand-alone weight. In fact, the larger the contemporary group, the greater the value the ratios have.

## Milk EPD Explained

The milk EPD is also one of the most often misunderstood EPDs.

First, by way of definition, Milk EPD (MILK) predicts the difference in maternal production of an individual animal's daughters as expressed by the weaning weight of their calves.

Unlike direct growth EPDs like weaning weight that predict the weight difference in the own progeny of bulls, Milk EPDs are expressed slightly differently. Milk EPDs reflect the maternal ability of an animal's daughters and are expressed as additional pounds of calf weaned by a bull's daughters due to maternal effects. This value does not include the genetics the animal passes along for growth.

When choosing the appropriate EPD range for the Milk EPD, one needs to consider the feed resources and environment of the operation in which the bulls' daughters will be expected to perform. In other words, more milk is not necessarily better as heavier milking cows may require more nutritional inputs to maintain body condition and reproductive efficiency. In addition, for commercial producers, breed needs to be an important consideration when evaluating milk EPDs. Some popular U.S. breeds have trended significantly higher for Milk EPDs in recent years and some moderation may be important if replacements are to be retained.

Like all maternal EPDs, the accuracy values on Milk EPDs cannot be fully realized until bulls have daughters in production. Until that time, the bull's own performance at weaning and yearling and genomics (if available) are the only information available to move the EPD from pedigree estimate. In the IGS evaluation, the genetic correlation between direct and maternal weaning weight is moderately negative – this means that outliers for growth may see a slight negative impact on MILK until they have a genomic test or weaning weights on daughter's calves that suggest otherwise.

### Total Maternal (TM) EPDs:

Like milk EPDs, TM EPDs are expressed as the predicted weaning weight differences of bulls' maternal grand-progeny. Total Maternal EPD predicts the total difference in weight of bulls' daughters' calves at weaning – due to both the maternal ability of the daughter (Milk EPD) as well as the genetics for growth that she passes on (1/2 the weaning weight EPD). Because it includes both direct and maternal impacts on growth, TM is the best predictor of how daughters of a bull will perform in terms of weaning heavier calves.

Even if Total Maternal is not published in a sale catalog, it can be calculated by simple arithmetic:  $\frac{1}{2}$  WW EPD + Milk EPD = Total Maternal. To illustrate the differences in WW, MILK and TM, let's use the example below.

	WW EPD	MILK EPD	TOTAL MATERNAL EPD
Sire A	72	15	51
Sire B	55	21	48.5

Assuming Sire A and B are used in the same environment and bred to genetically similar females, we would expect Sire A's calves to average 17 pounds heavier at weaning than Sire B's calves.

Now, let's assume that we retain daughters from both bulls in the herd and they are bred to genetically similar bulls. When weaning time rolls around, we'd expect Sire A's daughter's calves to weigh 2.5 pounds more, on average, than Sire B's daughter's calves. Indeed, Sire B had a higher Milk EPD, and his daughters probably produced more Milk than Sire A's daughters, but that "better" maternal environment provided by Sire B's daughters was not enough to overcome the genetics for growth that were passed on by Sire A's daughters.

Impressive daughter of the featured Select Sires bull Connealy Confidence. She's been a big time producer as well with a 92 BW 105 WW ratio on her first 3 progeny. Unfortunately she was one of several cows that had calves freeze down during a storm last winter since we lack facilities and labor for anything but range calving regardless of the weather. Most went to town but she was too good so we kept her. A 26B8 daughter by Game Changer is one of our very best replacements.

THE PRODUCTION COW OF THE SALE. Her 2019 son sold as lot 40 and was one of the very best bulls we've ever raised and was the high selling bull at \$12000 to Mathews Farms in Tennessee she's back this year with another herd bull son that sells as lot 95 and her first two sons both were in the top 10 high selling bulls in their group. Her Mytty In Focus dam was one our most impressive cows. 98B8 was born and raised as a twin to a heifer however her twin sister was injured late in the summer on grass and was culled at weaning. Outstanding ratio's of 99BW 105WW 103YW and whopping 130 IMF ratio on ultra sound on 3 bulls with a 368 calving interval.

11	1.5	83	125	18	60	7	-0.30	46	0.48	0.22	82.38

Young Gun will have another exciting sire group this year. Young Gun was the 2017 Reserve National Champion Balancer Bull in Denver and is proving to be an equally impressive breeding bull. His AGA calf crop data of 99 BW, 100 WW, 99 REA, 99 IMF, indicates he's a low-birth, high-growth bull; and our eyes tell us that they have his eye appeal, rib shape, muscle, and structural correctness to go with his impressive data. Look over this sire group. They're extremely strong and uniform and have some elite herdsire prospects selling. His first daughters came into production in 2019, and we feel that they may be his strongest asset. They are marvelous females.

## G DCSF POST ROCK POWER BUILT 37B8

75% GV Balancer® Bull	Red	Homozygous Polled

8	0.8	73	112	27	64	-1	-0.34	37	0.62	0.09	74.31

Post Rock Power Built first caught the attention of many as the crowd favorite in Denver and was the High selling bull in our 2015 sale to our friends at Circle S Ranch. His progeny are an easy find whether in the show ring, the pasture or the bull pen, they simply stand out with the added rib and muscle combined with eye appeal. Simply stated they are good!

## H BASIN PAYWEIGHT 1682

Purebred Angus Bull	Homozygous Black	Homozygous Polled
2/11/2011	1682	17038724

Payweight has certainly been the talk and high demand bull for the Angus breed. Simply stated, he's produced the best Angus sired balancer sale group that we've ever had. As the Payweight daughters have entered production, Payweight has seen a resurgence in demand as they are proving to be some of the best in the industry. Buy with confidence.

## I TTTT MIGHTY HOTT 1450B

50% GV Balancer® Bull	Homozygous Black	Homozygous Polled

18	-1.6	59	91	25	54	7	-0.37	21	0.24	0.41	79.52

Another new and exciting sire group is the TTTT Mighty Hott ET. Mighty Hot was selected as the Balancer Breeder Choice Futurity winner in 2016. Walking rights and a semen interest was purchased out of the National Sale by STUCKY BEEF GENETICS. His initial calf crop data of 1.0 CE 97 BW 100 WW 101 YW 100 REA 100 IMF on nearly 100 progeny from 21 herds is outstanding. His sons performed very well on gain test and ultra sounded very well this year against strong contemporary groups at Post Rock. This will be an important and long term large sire group that you'll enjoy sorting thru whether you are looking for an elite sire to lead your seed stock program or a large group of bulls to build your cow herd and top the market with his steer calves.

## J VRT LAZY TV DISTINGUISHED C136

13	-1.7	86	142	33	76	9	-0.44	52	0.70	0.65	102.43

In a Data driven world C136 has few equals. We purchased this Angus sired Discovery son out of the performance strong Thorstentson herd in South Dakota as the high selling high ratiating bull in the 2016 sale. C136 Posted a 97 BW ratio against 132 contemporaries a 123 WW ratio and was ranked #1 against 114 herd mates and 117 YW ratio also ranking #1 against 80 herd mates all in a low 6 frame size. On ultra sound he posted a 104 REA ratio and a 113 IMF ratio against 75 herd mates. His dam posted an impressive 102 BW 111 WW 106 YW ratio's on 6 calves and is a Dam of Merit. His granddam has a 98 BW 104 WW 98 YW ratio's on 7 calves and has also been awarded a Dam of Merit. His great granddam has a 83 BW 105 WW 101 YW ratio's on 9 calves and is an AGA Dam of Distinction. In his initial calf crop C136 has a 94 BW ratio 101 WW 102 YW 100 REA and 121 IMF ratios. He has as strong of curve bending EPD profile as you can write and has as large contemporary group data base generations deep to back it up. Look over his sons selling they jump out at you in person and on paper and are new and exciting sire group.
